Steps 5, 6, and 7: Divide the term with the highest power inside the division symbol by the term with the highest power outside the division symbol. Next multiply (or distribute) the answer obtained in the previous step by the polynomial in front of the division symbol. In this case, we should get  $4x^2 / 2x = 2x$  and  $2x(2x + 3)$ . Finally, subtract and bring down the next term.
