Theory of Evolution. In his book The Origin of Species, Darwin presented evidence for his "descent with modification" theory, which has come down to us as the theory of evolution, although Darwin avoided the term "evolution." Essentially, Darwin suggested that random variations take place in living things and that the environment selects those individuals better able to survive and reproduce.

### Theory of Evolution - CliffsNotes Study Guides

Darwin began to formulate his concept of evolution by natural selection after observations of many species and their geographical location According to Darwin's theory of natural selection, the individuals that tend to survive are those that have

### Biology- Evolution Study Guide Flashcards | Quizlet

Evolution implies a change in one or more characteristics in a population of organisms over a period of time. The concept of evolution is as ancient as Greek writings, where philosophers speculated that all living things are related to one another, although remotely.

One piece of evidence offered by Darwin is found in the science of paleontology. Paleontology deals with locating, cataloging, and interpreting the life forms that existed in past millennia. It is the study of fossils—the bones, shells, teeth, and other remains of organisms, or evidence of ancient organisms, that have survived over eons of time. Paleontology supports the theory of evolution because it shows a descent of modern organisms from common ancestors.
