Small public drinking water systems serve nearly 90 percent of the U.S. population. The EPA generally recommends small systems employ point-of-entry or point-of-use treatment devices to keep these customers' water in compliance, as well as provide packaged or modular filtration systems to bolster treatment efforts.

Guide to EPA Drinking Water Standards | Multipure

Drinking water quality standards describes the quality parameters set for drinking water. Despite the truth that every human on this planet needs drinking water to survive and that water may contain many harmful constituents, there are no universally recognized and accepted international standards for drinking water. Even where standards do exist, and are applied, the permitted concentration of individual constituents may vary by as much as ten times from one set of standards to another. Many de

Drinking water quality standards - Wikipedia

The Guidelines for drinking-water quality (GDWQ) promote the protection of public health by advocating for the development of locally relevant standards and regulations (health based targets), adoption of preventive risk management approaches covering catchment to consumer (Water Safety Plans) and independent surveillance to ensure that Water Safety Plans are being implemented and effective and that national standards are being met.
